Dear Hiring Team,

I am excited to submit my application for the Android Developer position. My journey into Android development began during the 8th semester of my studies when I was introduced to Android Studio. The ability to see the results of my code in real-time on a device that we use daily captivated me and inspired me to explore the field of Android application development further.

Driven by this passion, I attended a seminar on Kotlin, where I gained foundational knowledge of the language and best practices for app development. Subsequently, through my university internship, I worked as an Android Developer in a startup. Within just a month, I was entrusted with significant responsibilities such as debugging, developing new features, and resolving production issues.

The application I worked on was in its early development stage, with a high level of technical debt. This gave me the opportunity to enhance and implement practices like MVVM, dependency injection, SOLID principles, delegation patterns, caching, and prefetching. Despite the initial challenges, my enthusiasm for software development motivated me to grow quickly, making meaningful contributions to the technical foundation of the application. Additionally, I worked on integrating Jetpack Compose, introducing modern and efficient solutions for UI development.

This experience taught me how to collaborate effectively within fast-paced environments, confidently tackle problems, and deliver solutions that improve the user experience. I believe that these skills, combined with my passion for technology and continuous learning, make me a strong candidate for the position.

I would be thrilled to have the opportunity to discuss how I can contribute to your team. I am available for an interview at your convenience and look forward to hearing from you.

Sincerely,

Siandri Elpida
